

5 LITRE SAMPLING TIN

SPECIAL \$109.00 EX GST

Oil company and national regulations require that aviation fuel samples are retained for a specific period of time, so that in the event of fuel quality being questioned representative fuel sample can be subjected to a full laboratory analysis. For this reason it is recommended that all sites have 4 sampling tins on hand at any one time.

Aviation Components carries a 5 litre, dangerous goods compliant sampling tin. They have a 50mm diameter, wire lockable cap for easy filling and can be wire/lead sealed. Our sampling tins are lined with a flexible epoxy lining that will not crack when subjected to external impact.
